# PROFILE

Established in Jamshedpur, India in the year 1907, Tata Steel is part of the 150-year-old Tata group. Bringing to reality the vision of its founder, J. N. Tata, who inspired the steel and power industry in India, the Tata Steel Group is amongst the top 10 largest steel manufacturers in the world and is known to be the hallmark of corporate citizenship and business ethics. With operations in 26 countries and commercial presence in 50 countries, the Tata Steel Group has a steel production capacity of 27.5 MnTPA (as on March 31, 2018) and registered a turnover of US \$9310 Mn in FY 2018. Tata Steel India has manufacturing units at Jamshedpur, Jharkhand, with a production capacity of 10 MnTPA and at Kalinganagar, Odisha, with a production capacity of 3 MnTPA. In FY 2017-18, our Kalinganagar unit received approvals for expansion to 8 MnTPA. Tata Steel operates with a completely integrated value chain that extends from mining to finished steel goods.

In 2018, Tata Steel acquired erstwhile Bhushan Steel Limited renamed as Tata Steel BSL Limited which was India's fifth largest flat steel producing company with an existing steel production capacity of 5.6 million tonnes per annum (MTPA) as on March 31, 2018. It has India's largest Cold Rolled Steel Plant and is one of the largest suppliers of automotive grade and high carbon special steel in the country.

# Tata Steel - Tubes Division

A new dimension in steel tube technology opened in India in the early 50's - with the establishment of the Indian Tube Company Limited (ITC), on the 17th of December 1954. It was the outcome of a joint venture between Tata Steel and Stewarts and Lloyds of UK. In 1985, the Indian Tube Company merged with Tata Steel to form the Tata Steel- Tubes Division. The Tubes Strategic Business Unit (SBU), has retained its leadership position in the segments it operates, and it has an installed capacity of over 6,00,000 tons per annum. The Tubes Division manufactures commercial, structural and precision tubes at its Jamshedpur - Tubes Division Plant. The SBU has a network of sales offices across the country with marketing headquarters in Kolkata to provide better customer service.

In 2018, Tata Steel acquired the erstwhile Bhushan Steel, now known as Tata Steel BSL (TSBSL), having installed tube manufacturing capacity of 8,50,000 tons at its Sahibabad, Hosur & Khopoli plants located in key consumption hubs of India. The Khopoli plant of TSBSL has two large diameter ERW pipe mills of 5,50,000 tons/annum capacity capable of producing pipes for conveyance, structural as well as the Oil & Gas segment thus making Tata Steel the most diversified tube & pipe manufacturer in India.

## State-of-the-art Technology

The Tubes SBU has embraced the culture of business excellence reflected through a leading presence across several lines of business. A high degree of customisation has been achieved through a comprehensive plant modernisation programme, involving upgradation of the plant, technology and process control.

# Business Verticals

The four main lines of business are

1

## Conveyance Tubes

Galvanized & MS tubes under the brand "Tata Pipes" cater to conveyance requirements of process industries, rehydrants and HVAC, irrigation borewell segment as well as plumbing applications for water supply.

2

## Structural Tubes

High Strength steel hollow sections (Yst 355) under the brand name Tata Structura cater to construction segment and for various aesthetic applications

3

## Precision Tubes

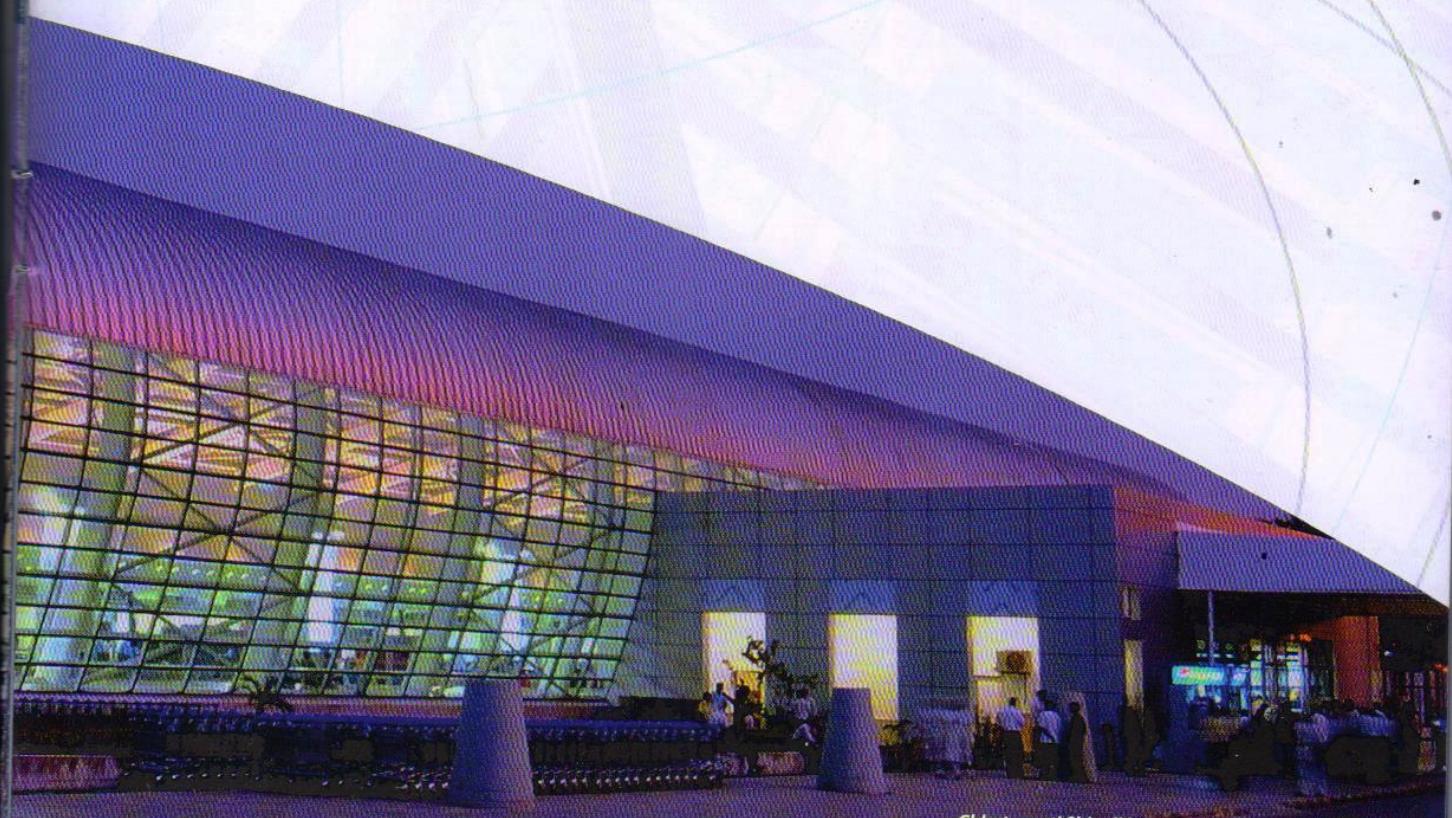

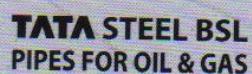

Manufactured with utmost precision these tubes cater to the high end-Automotive, Boiler & General Engineering segments.

4

## Pipes for Oil & Gas

TSBSL is a leading supplier of high quality ERW pipes to the Oil & Gas industry around the world with a complete range of tubes required for the same.

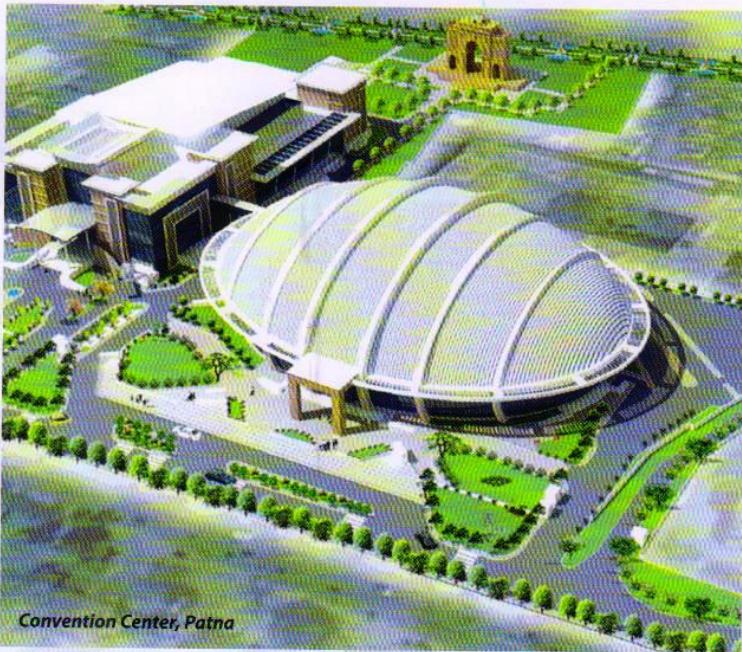

Chhatrapati Shivaji International Airport, Mumbai

# Engineered for Excellence & Admiration

Steel hollow sections are an integral part of modern steel construction

Steel hollow sections are proving to be the most versatile and efficient form of structural steel for construction and mechanical applications. Many of the iconic and most impressive structures in the world would not have been possible without hollow sections.

Now-a-days, steel is being exposed more in its applications to reveal its essence. This requires it to be aesthetically appealing along with the needed strength. The tubular form is most suitable for such applications which gives structures a better strength to weight ratio and aesthetic appeal as compared to conventional steel sections, concrete and timber products.

## Tata Structura Yst 355

Tata Structura was launched in 2005 and is currently the leading hollow section brand in Project construction in India. Tata Structura has been used in more than 30 airports, 20 stadiums, 7 metro projects and many more iconic projects across India. Tata Structura YST 355 was launched in 2016 and was the first brand to launch YST 355 grade hollow section in India.

Tubes SBU manufactures structural tubes under the brand name Tata Structura conforming to IS:4923 and IS:1161 for Square/ Rectangular and Circular Hollow sections respectively. Tata Structura-Yst 355 High Strength Steel Hollow sections are superior in quality and are manufactured using best grade raw materials(HR Coils) from Tata Steel's world-class Hot Strip Mill. The Tata Structura-Yst 355 comes with yield strength of 355MPa and UTS of 490 MPa, providing better strength to weight ratio and sectional properties. This in turn helps in steel savings upto 40% as compared to conventional angles/ channels and upto 20% compared to local steel hollow sections. This steel savings ultimately leads to more economical project execution.

Tata Structura (Yst-355) sections can be manufactured up to a maximum size of 500x500 mm for square sections, 700x300 mm for rectangular sections and 600 NB for circular sections. These sections can be rolled in wide thickness range from 2mm to 20mm. Tata Structura has multiple applications like Airports, Stadiums, Foot Over Bridges (FOB), Industrial sheds, Railway Platform sheds, Bridges, Metro, Steel Buildings etc.

The usage of Tata Structura – Yst 355 results in making projects economical, sustainable, aesthetical & safe structure

# Tata Structura (Yst 355)

## High Strength Steel Hollow Sections

### GLOBAL STANDARDIZED GRADE FOR CONSTRUCTION

Yst 355 grade have widely been used internationally for various iconic and critical projects

### SUSTAINABLE CONSTRUCTION

Tata Structura is Green-Pro certified product by CII-IGBC and these high strength steel sections leads to material savings which makes the projects economical and sustainable

### FULL PRODUCT RANGE

Along with TSBBL facilities, upto 500mmx500mm, 600NB and 700mm x 300mm sections can be manufactured in a wide thickness range from 2mm to 20mm

### RELIABILITY

By using High grade quality HR coils (produced from own Tata Steel plant) as raw material, we ensure the best quality product which can be used for applications ranging from Industrial, Infrastructural, residential, General engineering, architectural etc.

## Internal Corrosion - A Case Study

**Objective:** Identify the possibility of corrosion in the internal surface of steel hollow sections

### Details of the study conducted:

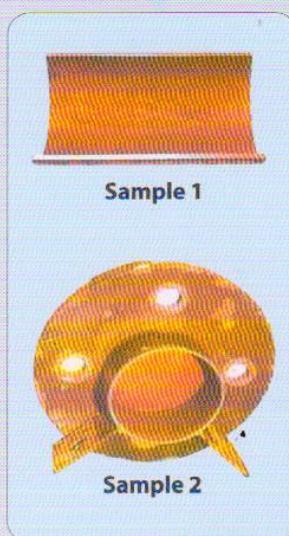

Two of the original 'Tubewrights' erected in 1954 at Stamford Bridge, Chelsea were replaced in 1975, taken down and the used sections were cut and despatched to the Corby Works of British Steel for examination.

Sample No. 1 of the 139.7 mm o.d. CHS was cut lengthwise to expose the internal surfaces for examination. Little evidence of internal corrosion was found other than a discolouration of the surface caused by the oxygen and moisture in the entrapped air, much of

the original mill scale was still visible. A light rust in the centre of the sample developed after the tube was cut open for examination.

Sample No. 2 of the 139.7 mm o.d. CHS incorporating an intermediate flanged joint was examined and the condition of the internal flange face, which had been enclosed and thus hermetically sealed by welding to the CHS, was still comparatively bright, with the original marking-off lines clearly visible.

**Outcome & Recommendation:** All the free ends of the steel hollow sections should be properly sealed by welding end plates.

**Source:** The above report is from British Steel Publication No. TD 347/10E/91 titled  
- CORROSION, THE CASE FOR STRUCTURAL HOLLOW SECTIONS.

# Product Attributes:

## Sustainable:

- "Tata Structura" is now Green-Pro certified by CII-IGBC.
- We are the only player in this structural steel segment in India to have this certification.

## Architectural:

- Smooth profile of hollow sections enhances the aesthetic appeal
- High quality surface finish
- Best suited for architecturally exposed steel
- Easy to bend into various forms and shapes
- Clutter-free fabrication for visually appealing look

## Structural:

- Superior sectional properties of Tata-Structura allow better use of material which results in material savings.
- Up to 40% as compared to conventional angles/ channels sections

- Up to 20% as compared to local steel hollow sections
- High grade of steel and better ductility ensures lighter weight of structural system
- Encourages use of long Unsupported lengths for Columns and Beams
- High torsional rigidity

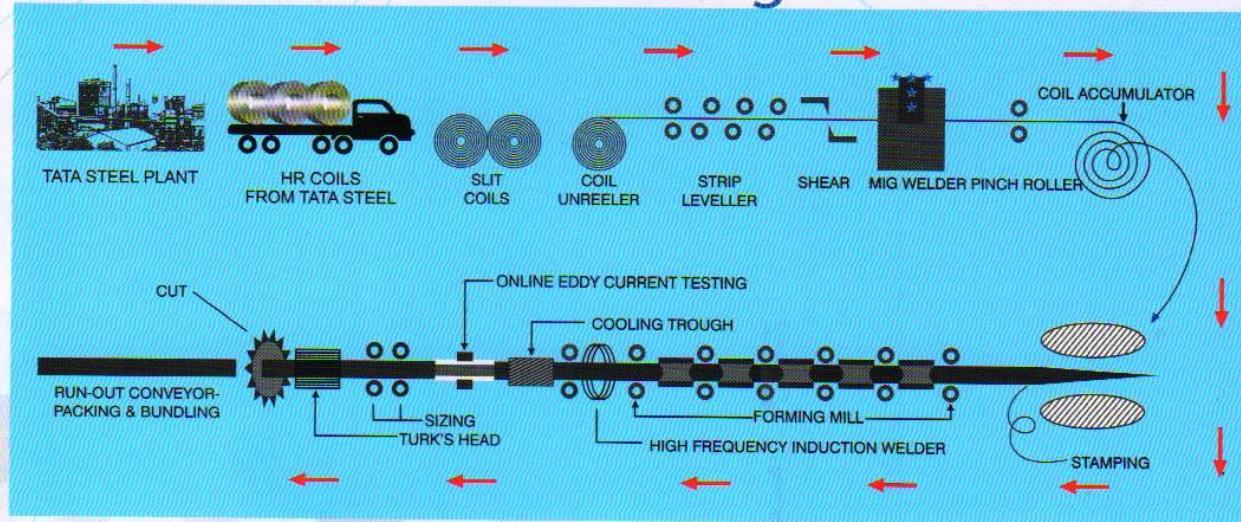

## Fabrication & Maintenance:

- Material savings due to higher grade (Yst 355) which results in lesser cost for fabrication & erection
- Elimination of gusset plates & direct member to member connections
- Well rounded corners ensure maintaining uniform coating thickness
- No dust accumulation, unlike open sections which has exposed internal surfaces

# Process of Manufacturing

## Quality Control

The quality of our product is controlled during the manufacturing process. It starts with slitting the HR coils, continues with speed, temperature control during the High Frequency Induction Welding (HFIW) and is followed by online Non-Destructive (NDT) eddy current testing directly after welding. Off-line drift and flattening tests are conducted. This is all within our ISO 9000 Quality Management System.

**18.3** If sections supplied in cold formed condition without any heat treatment are subjected to stress relieving, annealing, brazing, welding or similar heating, the mechanical properties may be reduced at the heated parts as follows :

Grade	Tensile Strength, Min, MPa	Yield Stress, Min, MPa
YSt 210	230	140
YSt 240	310	170
YSt 310	350	240

Control Room for On-line Non Destructive Testing

To ensure the design strength of the joints in the tubular structures post fabrication, it is important that yield strength of parent Hot Rolled Coils (HRC) should conform to same specifications of finished hollow sections. Tata Structura ensures that all sections supplied conform to these conditions.

# Tata Structura 355

## General Technical Specifications and Tolerances

### Other Allowable Stress Values (Mpa)

Steel Grade	Min Yst	Min UTS	Axial Stress in tension	Bending Stress in tension/ Compression	Shear	Equivalent Shear
Yst-355	355	490	213	234	160	319

### Permissible Axial Compressive Stress (Mpa) for Yst 355 Grade (Working Stress Method)

I/r	10	20	30	40	50	60	70	80	90	100	110	120	130
Ac	212	209	202	190	174	157	138	120	105	92	80	70	61
I/r	140	150	160	170	180	190	200	210	220	230	240	250	
Ac	54	48	43	38	35	31	28	26	24	22	20	19	

Section Type	Grade	Mechanical Properties				Dimensional Tolerance						
		YST	UTS	% of Elongation		Outside dimension	Thickness	Squareness	Corner radius	Weight		
				MPa	MPa	< 25.4 mm	> 25.4 mm			Individual Lengths	On lot of 10 MT	
RHS/SHS IS : 4923	YST 355	355	490	8	10	+/-1% with a minimum of +/-0.50 mm	+/- 7.5%	90 deg. +/- 2 deg.	3t max	10% -8%	+/- 7%	
CHS IS : 1161	YST 355	355	490	14	14	OD upto and incl 48.3+0.4/-0.8mm. Over 48.3 mm +/1.0%	+/-10%	NA	NA	+/- 10%	+/- 7.5%	

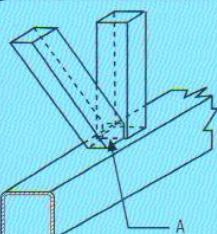

Galvanized sections can also be manufactured

Length	6.0m±0.05m Customized length ranging from 6m to 12m can be supplied.
Straightness	Minimum1: 200th. of any length measured along the centre line (mill straightened condition)unless other wise specifically arranged.
Twist Tolerance	Maximum 2 mm ± 0.05 mm/m length-measured relative vertical shift of any adjacent corner of the section, measured by keeping one side on flat surface.
End Finish	Plain ended-Mechanically sheared, mill-cut finish without further machining.
Surface Finish / Chemical Properties	Black without any surface treatment of oiling or varnishing.
Raw Material	Sulphur content: 0.04% max, phosphorus content: 0.04% max, carbon equivalent percentage within limits for better weldability.
Weldability	Tata Structura Steel Hollow Sections are weldable with standard M.S. Electrodes without any pre-heating.
Packing	Bundled by sealing metal strap and each bundle is labelled for size, measurement, lot number etc. Approximate weight of each bundle is 1.5 Mt (+/-500 kg).
Identification	Marking of 'TATA STRUCTURA' emblem on surface, punched/stenciled/sticker pasted, on all Steel Hollow Sections. Standard BIS mark is also put on the sections.
Note	Tata Structura Hollow Sections in customized size, grade, length, surface finish and end finish may be delivered as per agreed supply conditions.

\*Conditions apply

# Fabrication and Connection Details

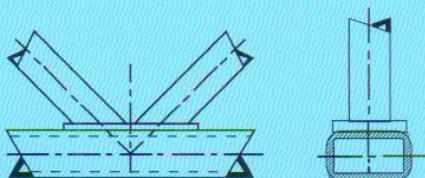

## Jointing : Workshop & Site Practice

### OVERLAP JOINTS

The weld seam 'A' can be omitted without affecting the behaviour of the joint.

### POSSIBLE REINFORCEMENTS

In certain cases reinforced joints are preferred for improved joint rigidity.

### CUTTING

Tata Structura Steel Hollow Sections can be cut:

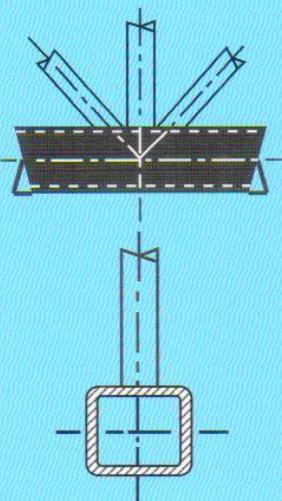

- By means of a heavy duty circular/hand saw
- By flame cutting: either manual or automatic
- The path of the cut can be marked directly on the surface of the section or on a template after shop layout
- For section thicknesses of 5 mm and above, edges may be chamfered for proper welding penetration

### BENDING

- Axial cold bending of Tata Structura Steel Hollow Sections is possible by using an internal mandrel and the roller must be adapted to the shape and size of the section
- Three roll bending machine may be adapted - bend by slow multiple pass, through trial and error method
- Thicker or larger sections are recommended to be preheated in a normalising furnace before bending in hot condition for better formation

## Jointing : Workshop & Site Practice

### GAP JOINTS

This arrangement is often the simplest and most economical and the joints are sufficiently strong. Joining member alignments should be at  $> 30^\circ$  with respect to the other.

### WELDING

Technique in principle is similar for that of conventional sections. Follow relevant BIS code of practice and design conditions.

- **Electrodes:** Low hydrogen electrodes are suggested for use.
- **Butt welds:** The throat thickness of the seam:
  - a) Wall thickness of the section when joining members are of equal thickness
  - b) Wall thickness of thinner section, If thicknesses are different. Backing strip may be provided to ensure total root penetration in case of thicker section design size.
- **Fillet welds:** Various types may be provided. Size of the fillet is guided by the throat thickness as explained above.
- **NOTE:** All free ends of Tata Structura Steel Hollow Sections should be sealed properly by welding, to prevent internal corrosion.
- Normal M. S. electrodes of reputed brands are recommended. Moisture from electrode should be removed by baking before welding.
- **Sequence:** Edges are to be tack welded to maintain uniform gap during welding to minimise residual stress:
  - Transverse weld before longitudinal one
  - Fillet weld following butt weld
  - Starting from inside to outwards.
